Linux Basic Knowledge

Linux Basic Knowledge

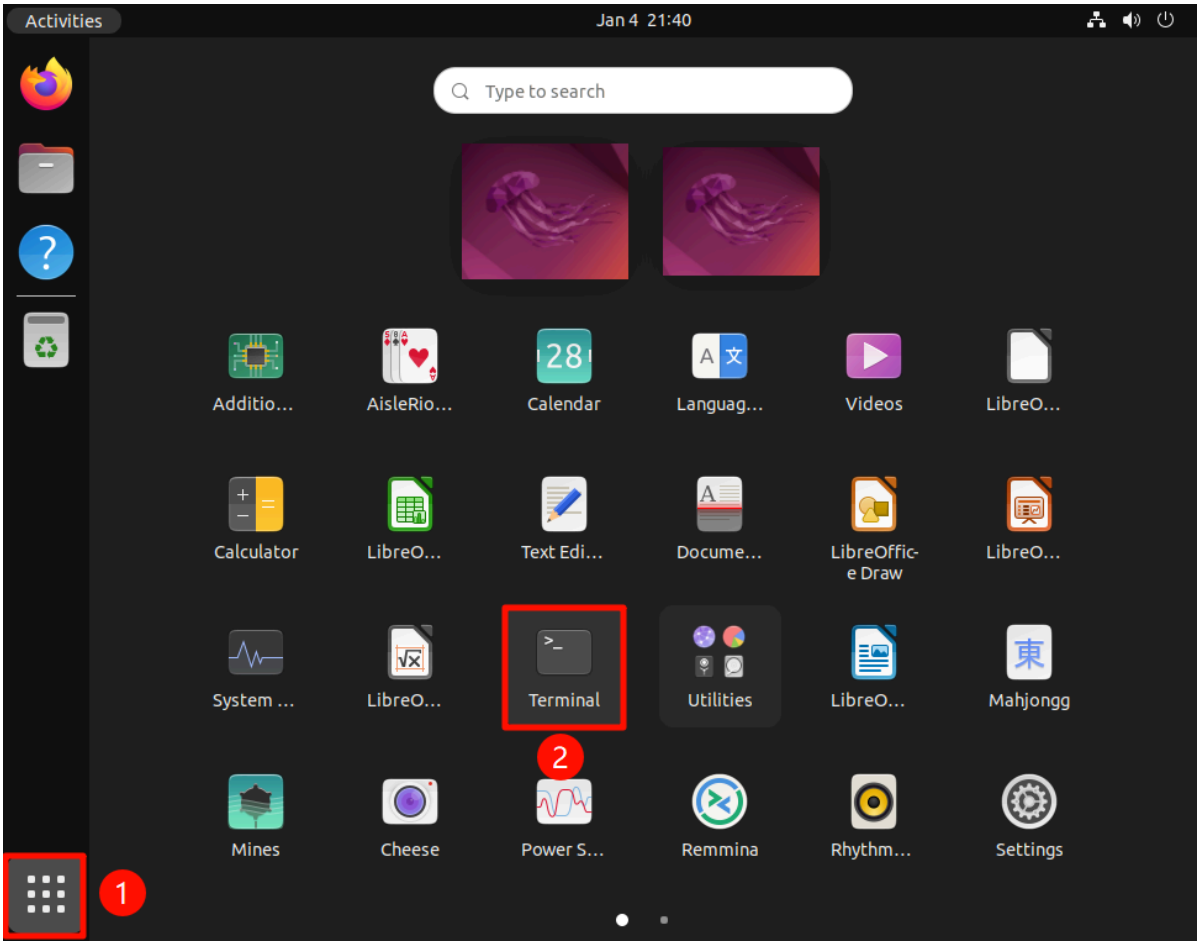

1. Terminal
    1.1. Open the Terminal
    1.2. Basic Commands
    1.3. Shortcut Keys
2. Text Editor
    2.1. Gedit (Easy)
    2.2. Nano (Medium)
    2.3. Vi/Vim (Difficult)

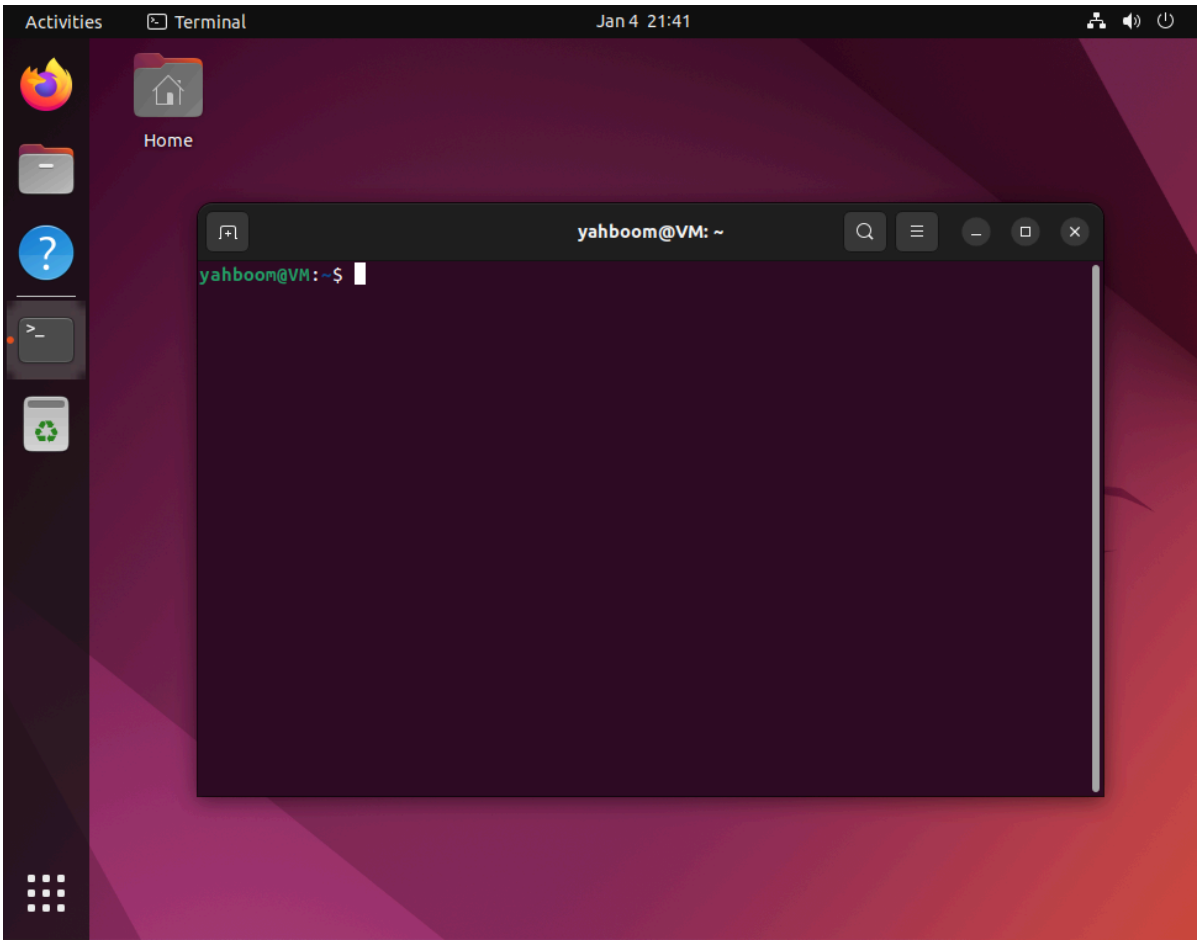

1. Terminal

The terminal (Terminal) is a command line interface used to interact with the operating system.

1.1. Open the Terminal

In Ubuntu, you can open it through the shortcut keys `Ctrl + Alt + T` or by finding the terminal (Terminal) in the application menu:

1.2. Basic Commands

> **View the current directory**

Display the full path of the current working directory:

```
pwd
```

> **List files/directories**

List the files and subdirectories in the current directory:

```
ls
```

> **Create a new directory**

Create the `File_demo` directory:

```
mkdir File_demo
```

> **Change directory**

Enter the `File_demo` directory:

```
cd File_demo
```

> **Return to the parent directory**

```
cd ..
```

Create a new file

Create the `Version.txt` file:

```
touch Version.txt
```

Modify a file

Add `System Information` to the `Version.txt` file:

```
echo "System Information" >> Version.txt
```

View a file

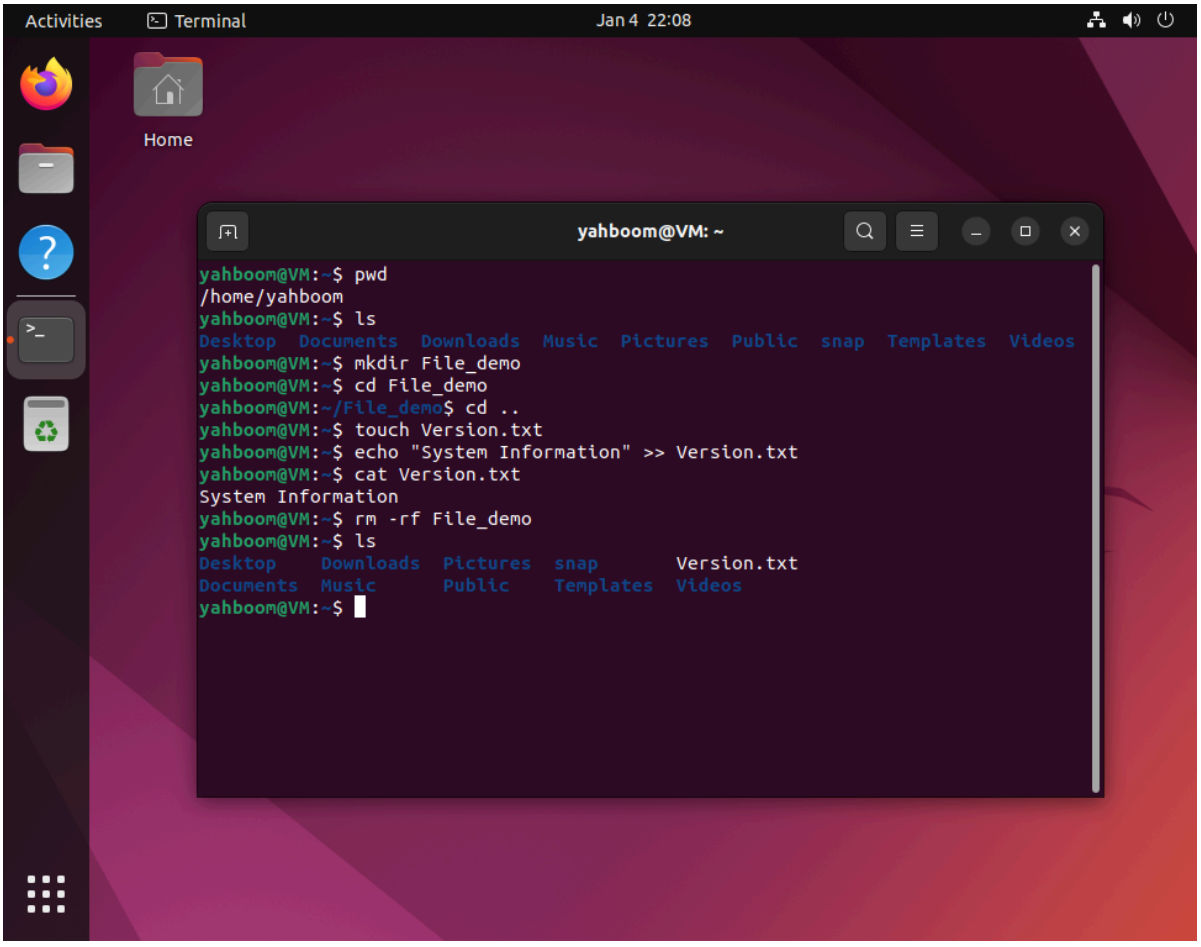

View the content of the `Version.txt` file:

```
cat Version.txt
```

Delete a directory

Delete the `File_demo` directory:

```
rm -rf File_demo
```

1.3. Shortcut Keys

> **Ctrl + C**

Terminate the currently running command

> **Ctrl + Z**

Suspend the current process

> **Tab**

Automatically complete the file name or command

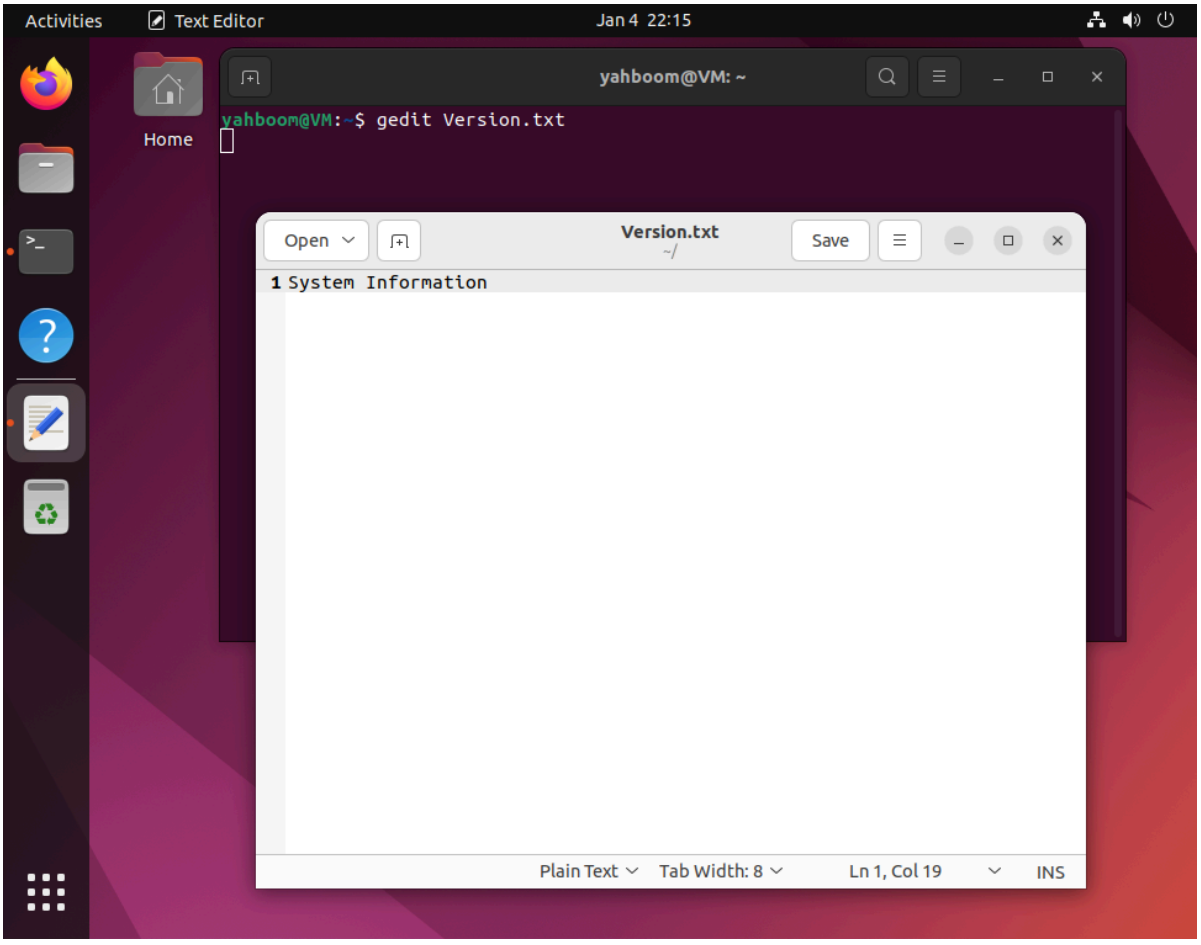

2. Text Editor

2.1. Gedit (Easy)

The default text editor in the GNOME desktop environment, with a graphical user interface (GUI).

> **Open a file**

```
gedit Version.txt
```

2.2. Nano (Medium)

A simple and easy-to-use command line text editor, suitable for beginners.

> **Install**

```
sudo apt update
sudo apt install nano -y
```

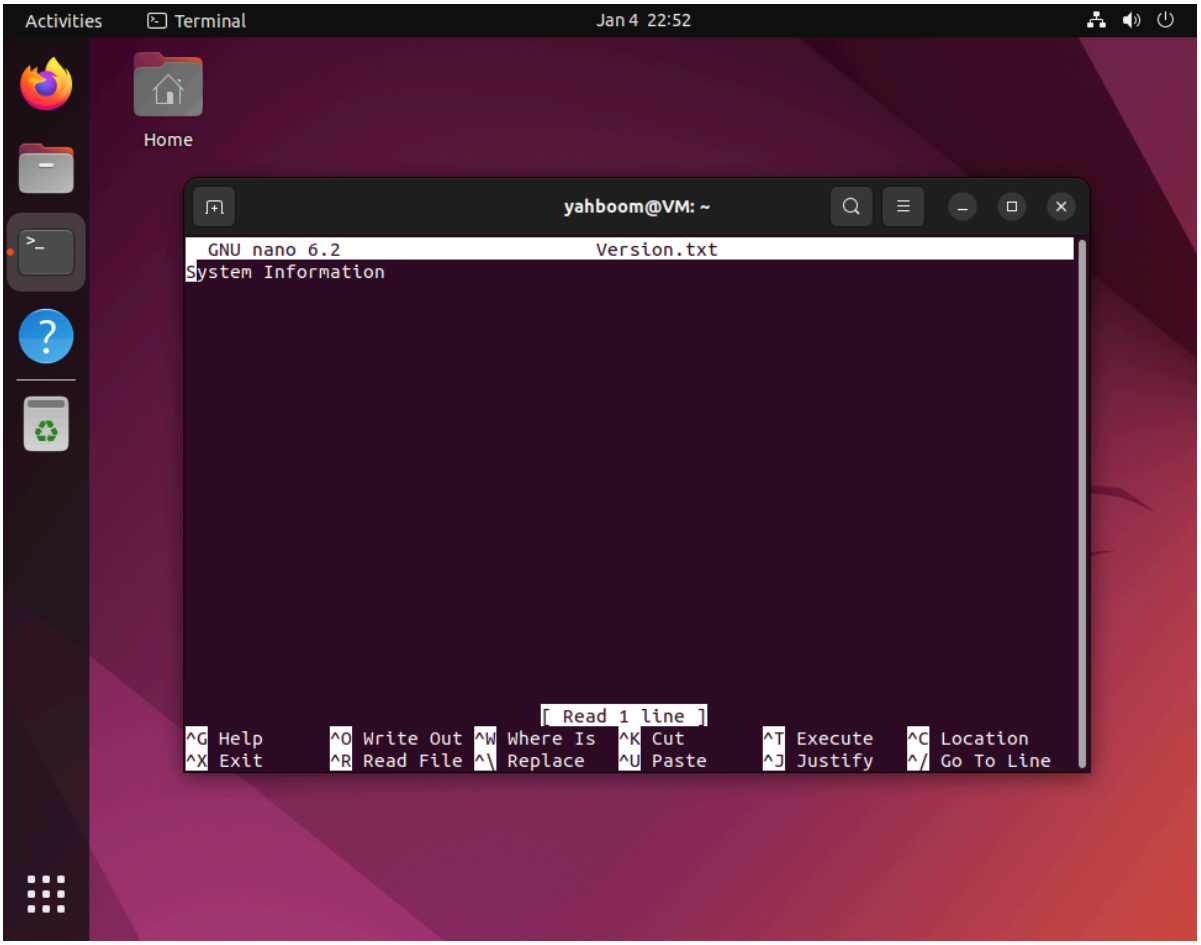

> **Open a file**

```
nano Version.txt
```

`Ctrl + X`: Exit (if there are unsaved changes, you will be prompted whether to save)

`Ctrl + U`: Paste the clipboard content

`Ctrl + W`: Search text

2.3. Vi/Vim (Difficult)

Vim is an enhanced version editor of Vi, applicable to almost all Unix and Linux systems.

> **Open a file**

```
vi Version.txt
```

> **Modes**

Command mode: default state

Insert mode: press `i` to enter, press `ESC` to return to command mode

Last line mode: enter `:` in command mode to enter, press `ESC` to return to command mode

> **Save/Exit**

Last line mode

`:w`: Save the file

`:q` : Exit

`:wq` : Save and exit

`:q!` : Force exit without saving
