OpenClaw Quick Start on the Jetson Platform

The image we provide already has OpenClaw configured, along with the Alibaba Cloud Bailian and QQBot plugins. You can follow this tutorial to start OpenClaw quickly and try out its features.

Jetson Nano users must work inside Docker:

Start Docker

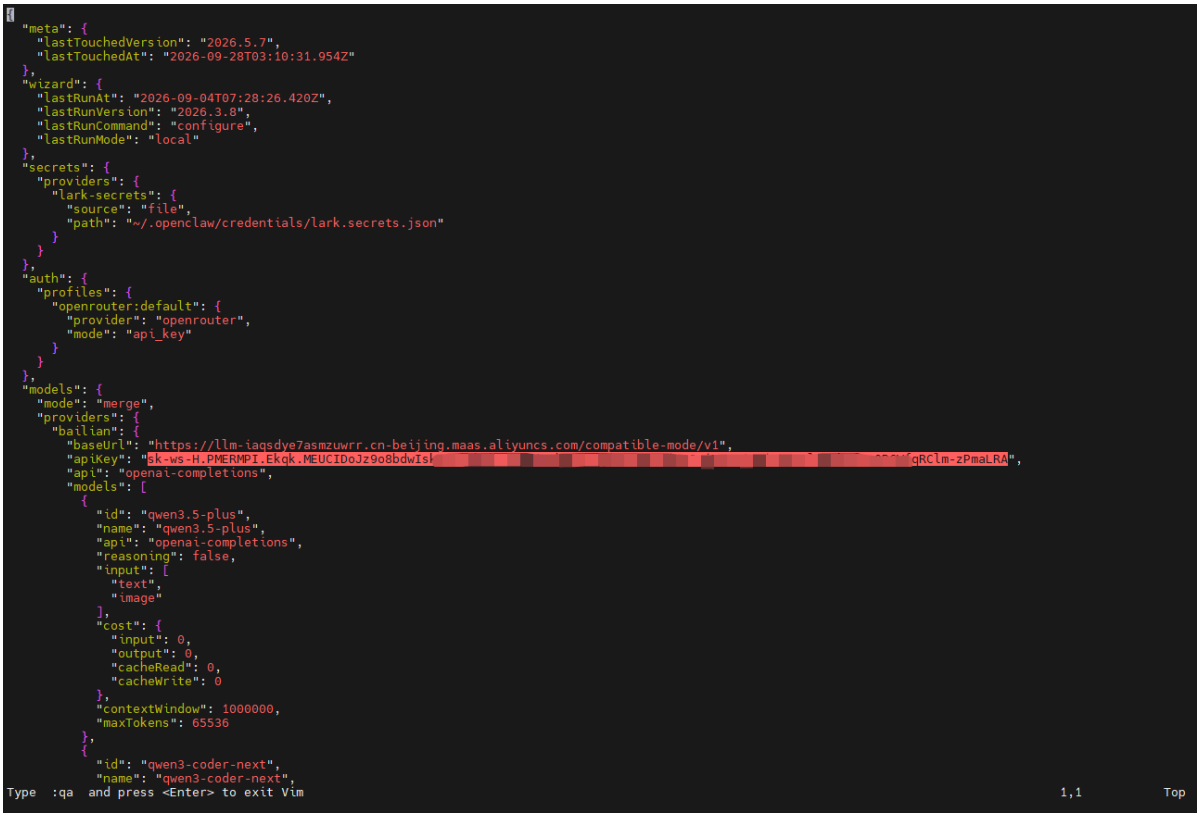

```
~/run_usb_docker.sh
```

In another terminal, enter Docker:

```
~/enter_docker.sh
```

1. First-Time Configuration

```
vim ~/.openclaw/openclaw.json
```

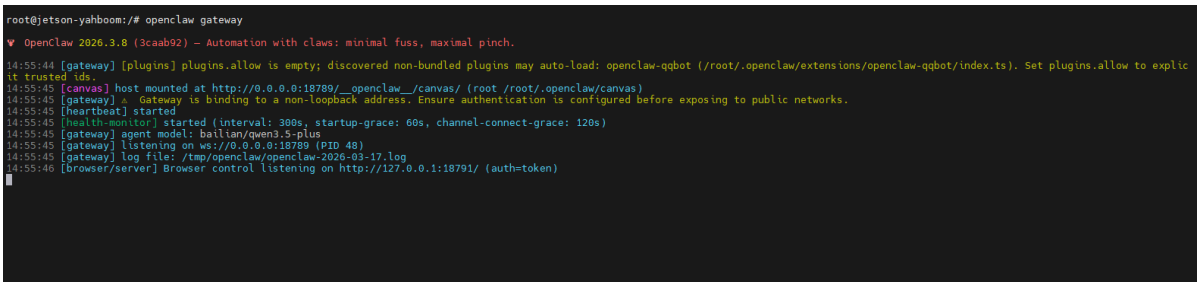

Fill in the key you obtained from the Bailian platform in the apiKey field under bailian. **How to get an API Key**: https://bailian.console.aliyun.com/

2. Starting OpenClaw

Start the Gateway in one terminal

```
openclaw gateway
```

Use the TUI in another terminal:

```
openclaw tui
```

> Note: The Bailian qwen3.5-plus model is used by default. You can enter /models to select another model. Since only Bailian models are configured, other non-Bailian models cannot be used.

🎯 Feature List

Available after configuring the Bailian API Key:

Feature	Description	Example
🎨 Image Generation	Text-to-image, image editing, image translation	"Generate a picture of a cat"
🎬 Video Generation	Image-to-video	"Turn this image into a video"
🎵 Speech Synthesis	Multi-role voiceover (CosyVoice)	"Read this aloud in a gentle voice..."
🎤 Speech Recognition	Speech-to-text	"Recognize this audio

⚙️ Optional Configuration

QQBot (Send QQ Messages; Refer to the Later Tutorial for Detailed Configuration)

1. Go to https://bot.open.qq.com/ to create a bot
2. Get the AppID and AppSecret

Edit `~/.openclaw/openclaw.json`:

```
{
  "channels": {
    "qqbot": {
      "enabled": true,
      "appId": "your_appid",
      "clientSecret": "your_secret"
    }
  }
}
```

Or configure it by chatting with OpenClaw in the OpenClaw chat interface

💬 Usage Examples

Image Generation

```
User: Generate a picture of a cute cat
AI: [image generated]
```

Speech Synthesis

```
User: Read "Moonlight before my bed, like frost on the ground" aloud in a gentle
female voice
AI: [audio file generated]
```

QQ Messages (QQBot Required)

```
User: Send me a QQ message saying "Dinner is ready"
AI: ✅ Message sent!
```

📂 Directory Structure

```
~/.openclaw/
├── .env              # API Key configuration
├── openclaw.json     # Main configuration file
├── setup.sh          # One-click setup script
└── workspace/
    ├── skills/       # Skills directory
    |   ├── aliyun-image/          # Image generation
    |   ├── alicloud-ai-audio-tts/ # Speech synthesis
    |   ├── alicloud-ai-audio-asr/ # Speech recognition
    |   ├── alicloud-ai-video-wan-video/ # Video generation
    |   └── qqbot-send/            # QQ messages
    ├── MEMORY.md     # AI long-term memory
    └── USER.md       # User information
```

🔧 Common Commands

```
# Start OpenClaw
openclaw

# TUI
openclaw tui

# Check status
openclaw status

# Configuration wizard
openclaw wizard

# List skills
openclaw skills list

# Help
openclaw --help
```

🎭 Available Voices (Speech Synthesis)

Based on Bailian's CosyVoice-v2

Role	Voice	Characteristics
Elderly man	longyichen	Steady, narrative
Young woman	longanrou	Gentle, natural
Young man	longhan_v2	Clear, steady
Girl	longhuhu	Lively, cute
Boy	longniuniu	Childlike, lively
