USB Camera Preview

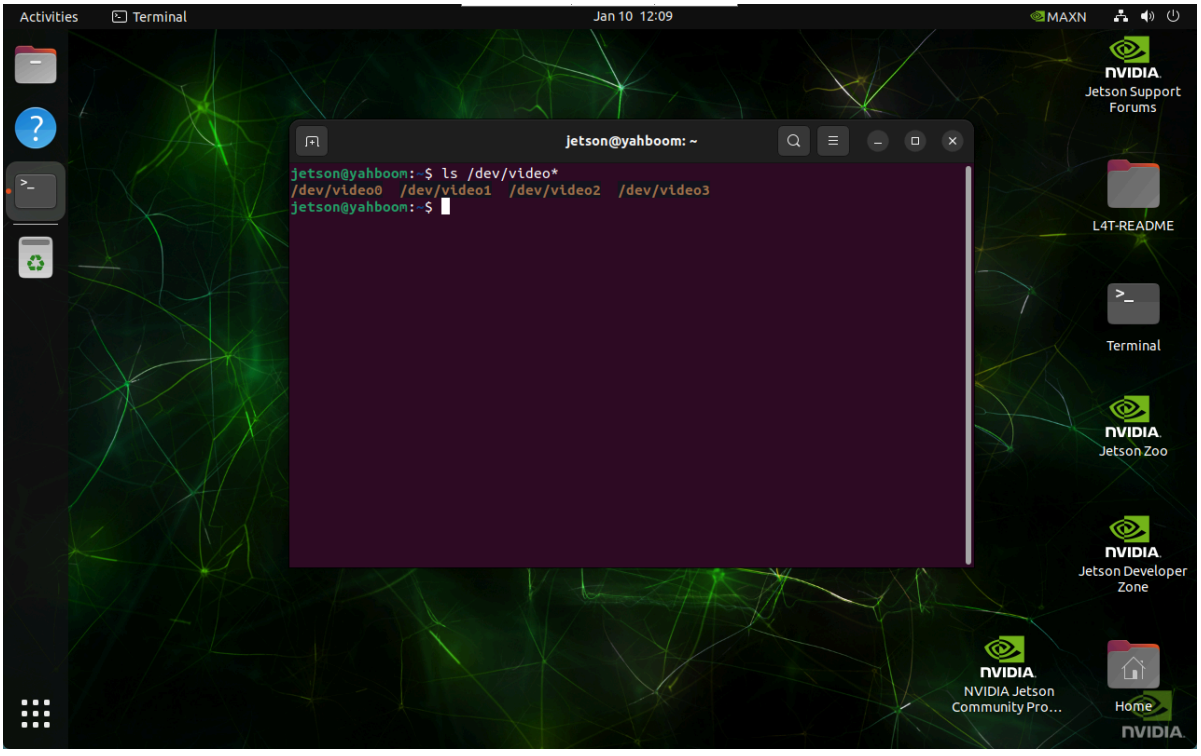

USB Camera Preview

1. Check the Video Device
2. GUVCView
    2.1. GUVCView Installation
    2.2. GUVCView Usage
3. VLC
    3.1. VLC Installation
    3.2. VLC Usage

1. Check the Video Device

```
ls /dev/video*
```

The result in the picture is the result of connecting two CSI cameras and one USB camera: generally, one CSI camera displays one `video` device, and one USB camera displays two `video` devices. For the USB camera, select the newly added `/dev/video2`, which has the smaller number, for calling (after the USB camera is connected, the system adds the `/dev/video2` and `/dev/video3` device numbers)

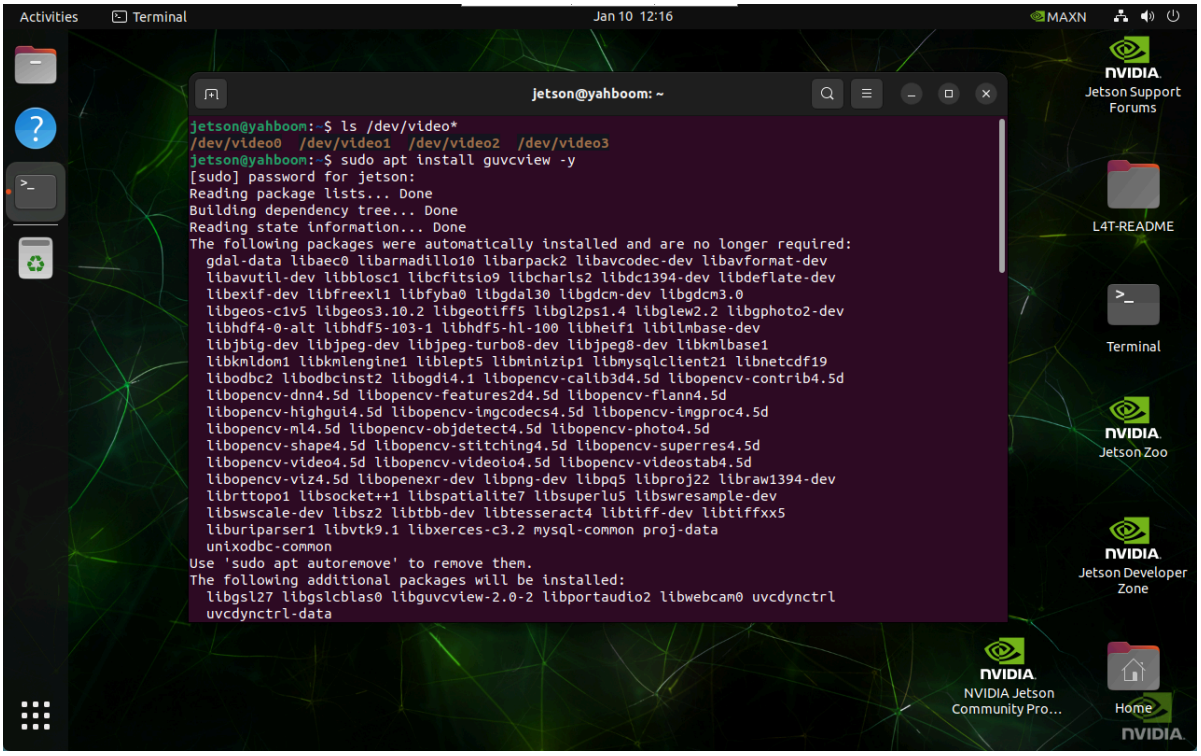

2. GUVCView

GUVCView is open source software for Linux systems, used to capture and record videos and images, mainly for Webcam cameras.

2.1. GUVCView Installation

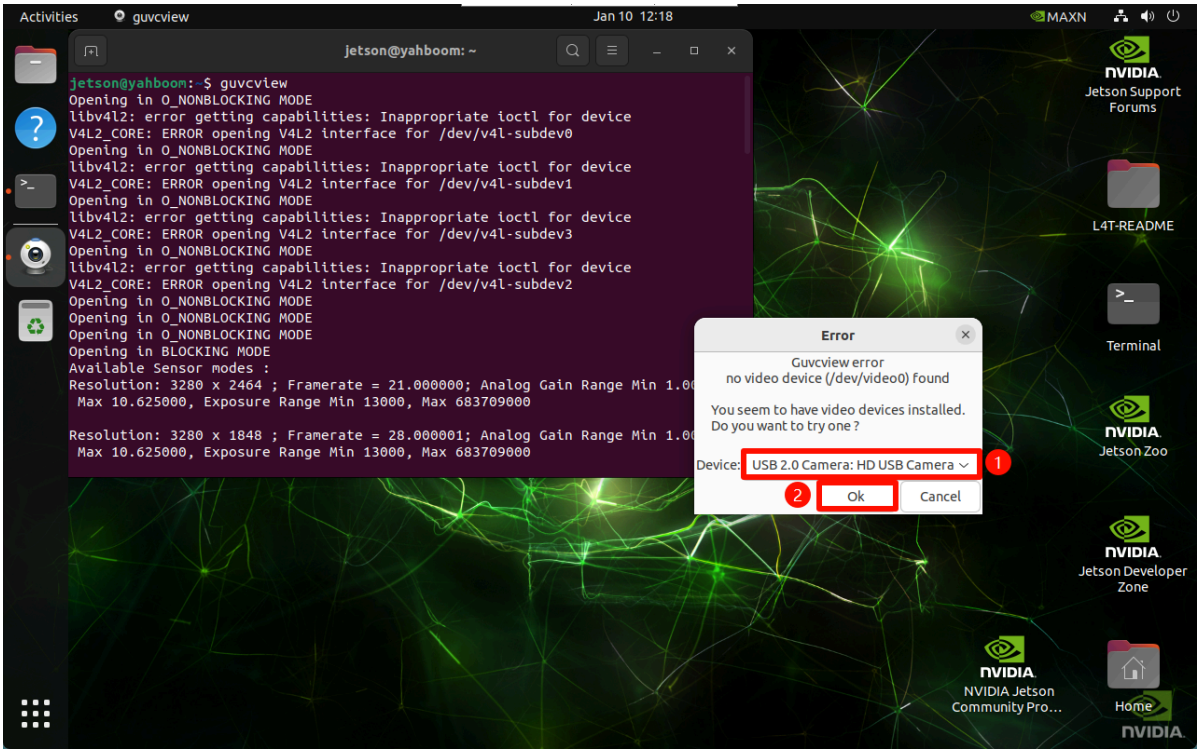

```
sudo apt update
sudo apt install guvcview -y
```

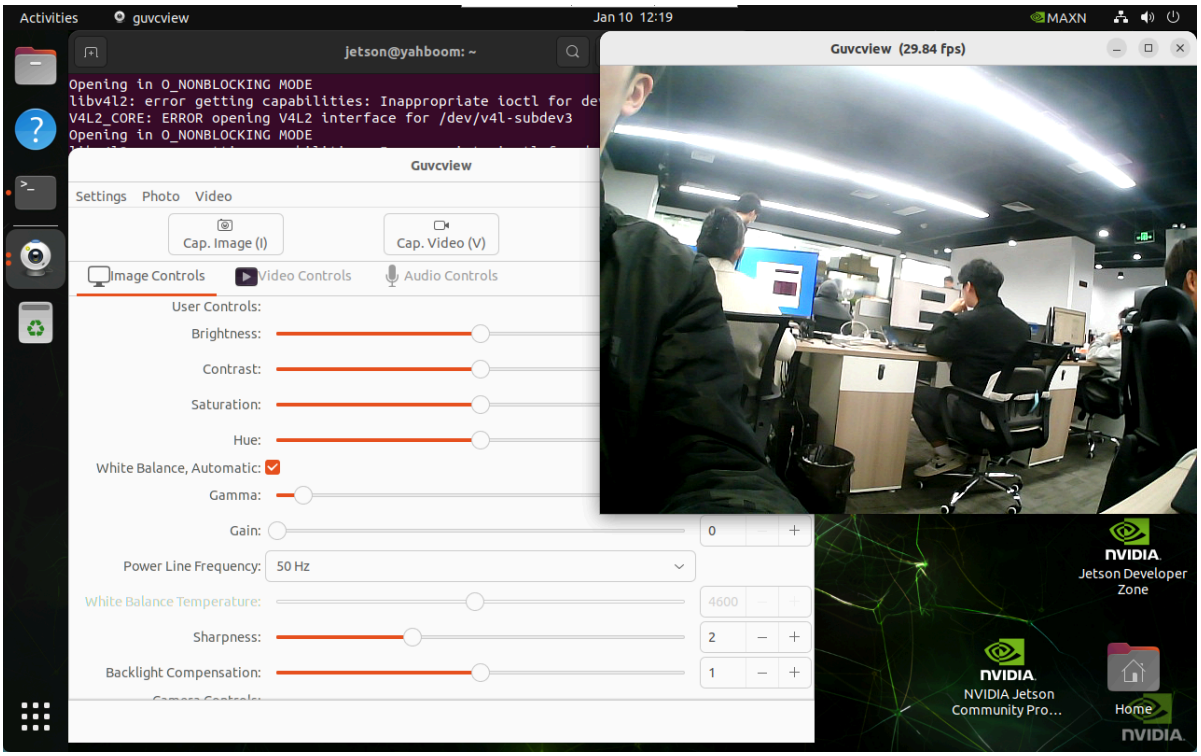

2.2. GUVCView Usage

Go to the application menu bar and click the `guvcview` icon, or enter the start command in the terminal: select the USB camera, and the CSI camera has no preview image

```
guvcview
```

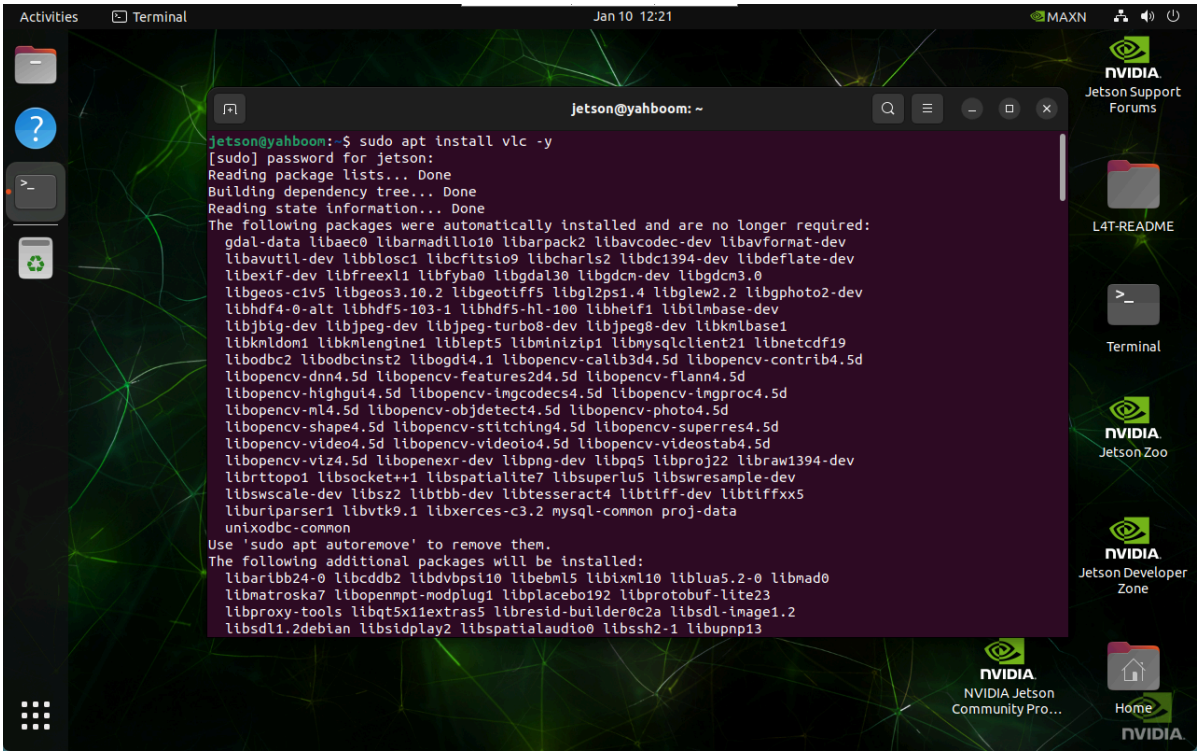

3. VLC

VLC media player is a free and open source multimedia player that supports various audio and video formats as well as DVD, audio CD, VCD, and various streaming protocols.

3.1. VLC Installation

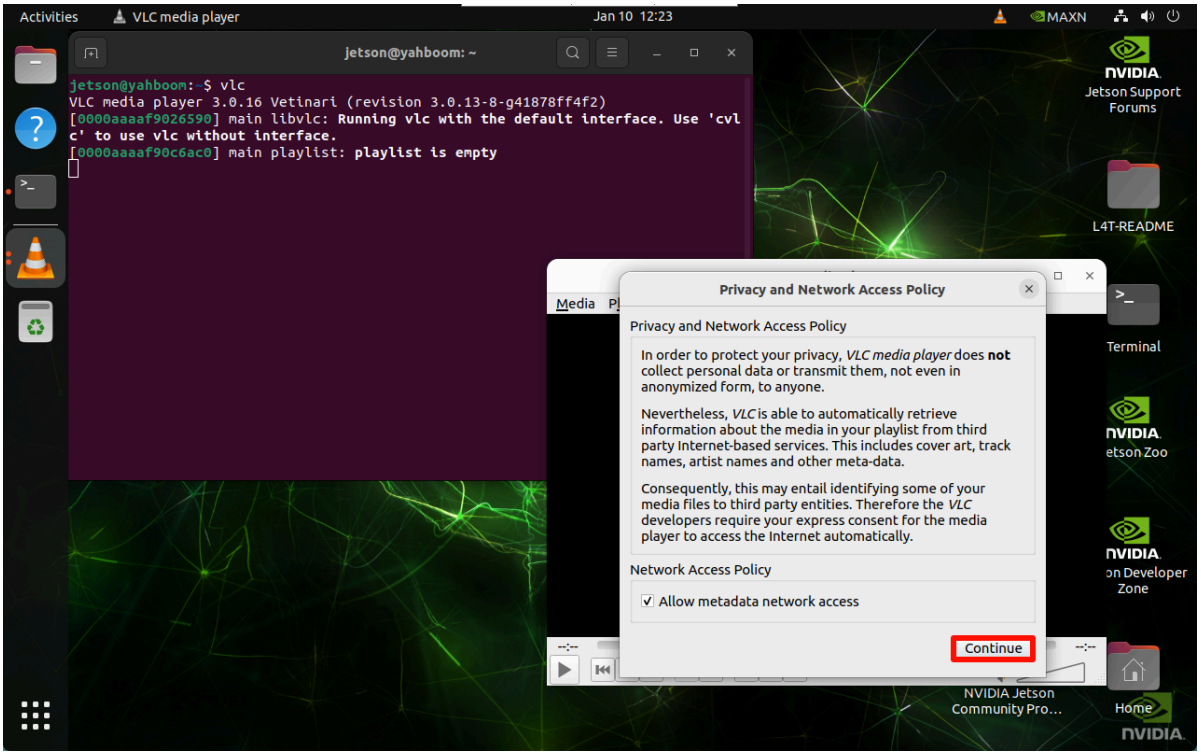

```
sudo apt update
sudo apt install vlc -y
```

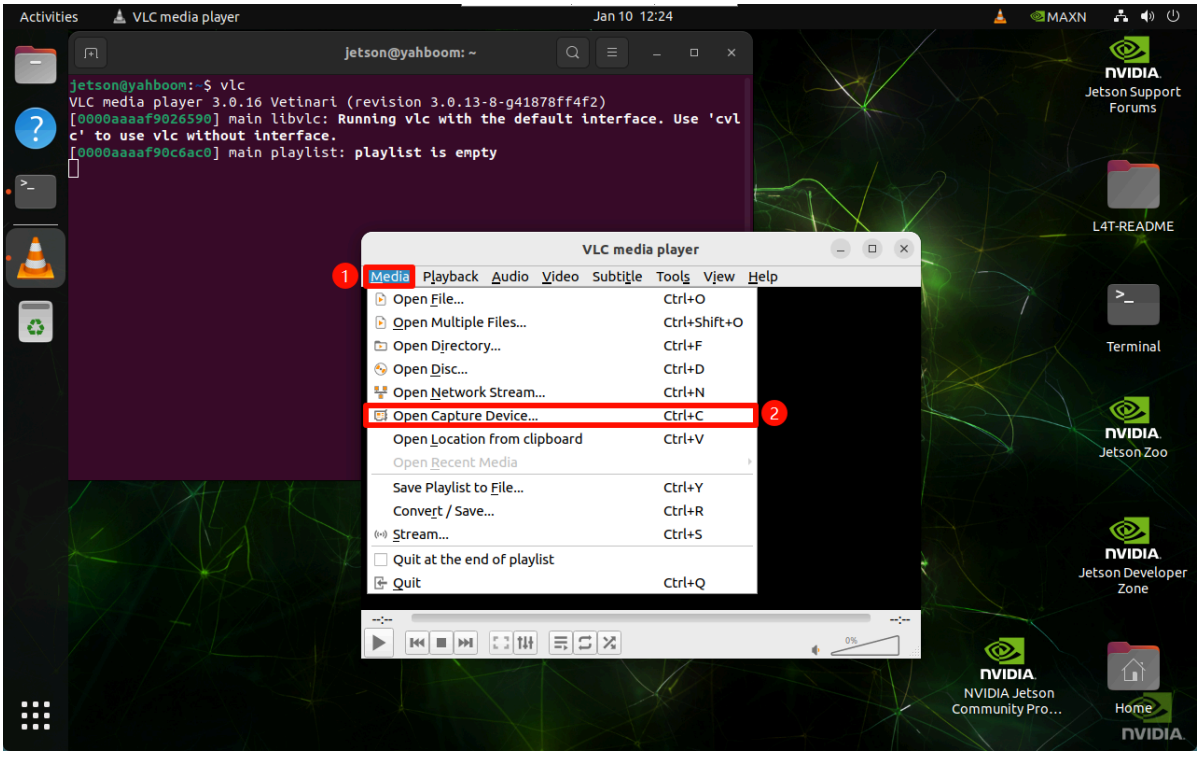

3.2. VLC Usage

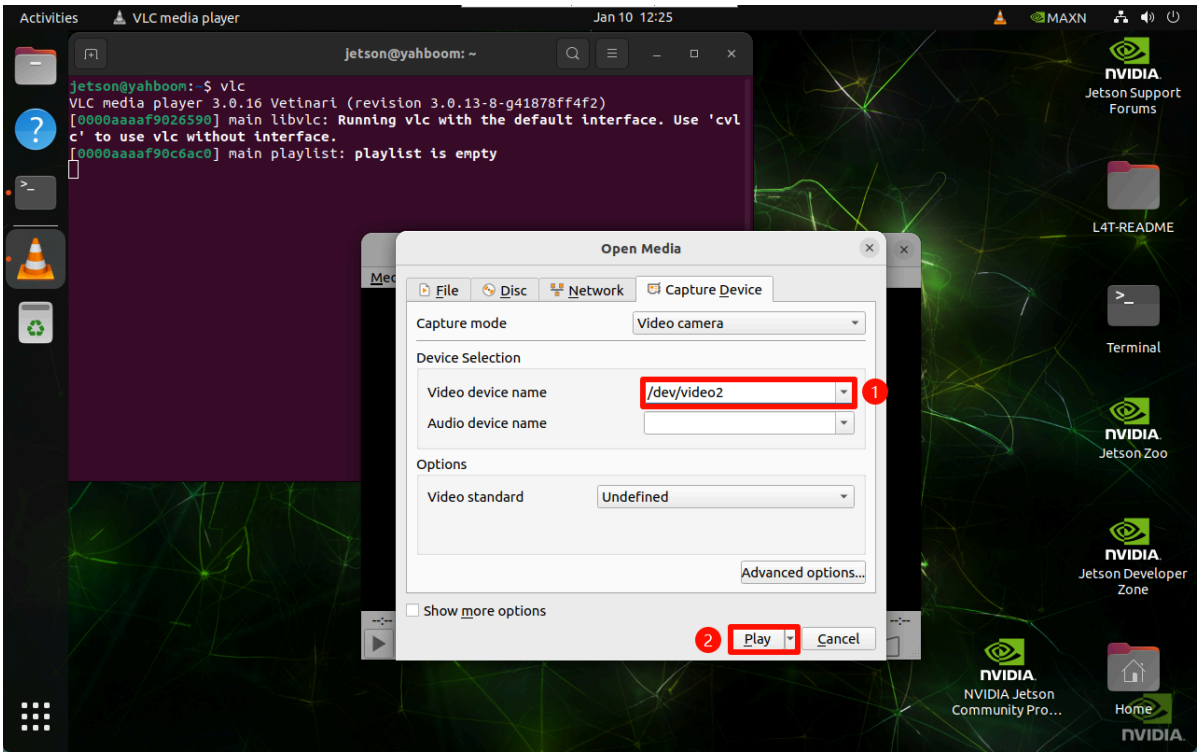

Go to the application menu bar and click the `VLC media player` icon, or enter the start command in the terminal: select the USB camera, and the CSI camera has no preview image

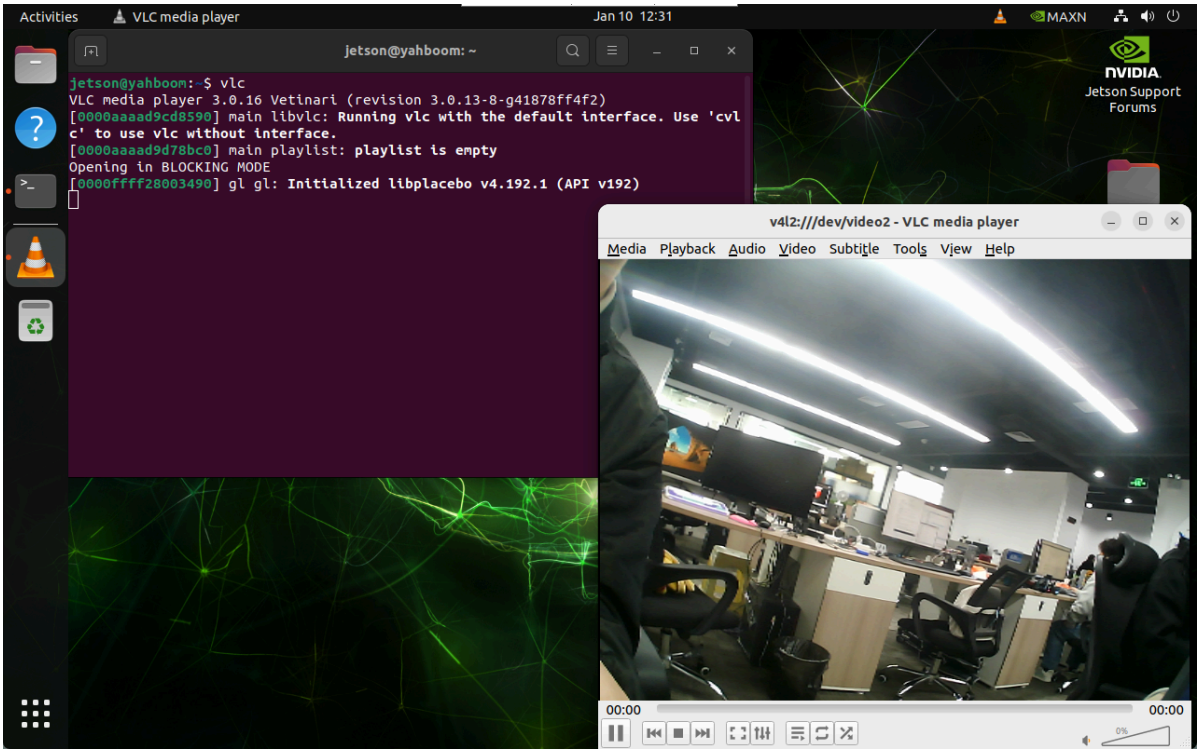

```
vlc
```

Select the device number corresponding to the USB camera:
